When a Customer initially contacts our Support Services team about a problem and a trouble ticket is opened, the Customer must set an initial Priority Level for the corresponding issue based upon Harris' incident case criteria as follows:

Priority	Description	Examples
"Priority 1 - High"	"Priority 1 - High" means a problem has occurred where (i) the Customer's mission critical system(s) are down; or (ii) a substantial portion of the Customer's mission critical data is at a significant risk of loss or corruption; or (iii) the Customer has experienced a substantial loss of service; or (iv) the Customer's business operations have been severely disrupted; and in each of the foregoing situations (i) through (iv), no workaround is immediately available.	• The System or Service is Down or inaccessible. • System errors without workarounds • Performance issues of severe nature impacting critical processes
"Priority 2 - Medium"	"Priority 2 - Medium" means a problem has occurred where major functionality is severely impaired. The Customer's operations can continue in a restricted fashion, although long-term productivity might be adversely affected.	• System errors that have workarounds • Performance issues are not impacting critical processes. • Usability issues
"Priority 3 - Low"	"Priority 3 - Low" means a problem has occurred that has a limited adverse effect on the Customer's business operations or (ii) a minor condition or documentation error that has no significant effect on the Customer's operations; or (iii) a suggestion for new features or an enhancement regarding the Services.	• It does not meet the criteria of priority 1 or 2. • Product does not work as explicitly documented. • Non-Critical usability issues (e.g., printing). • Enhancement requests.

Call Process

1. All Support issues or questions must be initiated with a Support call via one of the following channels: a) phone, b) Online Ticketing System, Team support and/or c) Email
2. All calls must contain at a minimum: organizational name, contact person, software or product name and version, module and/or menu selection, nature of issue, detailed description of the question or issue and any other information believed to be pertinent.
3. All calls are logged into TeamSupport and users are provided with a call id to track their corresponding issue.
4. All calls are stored in a queue, and calls are handled on a first call first-response order.
5. As the assigned support representative investigates an issue, the user is contacted and advised on the issue status and the course of action that will be taken for resolution. If additional information is required, the user will be contacted by the assigned support representative to supply the information required.
6. All correspondence and actions associated with the call are tracked in Vendor' support database. At any time, if applicable, a user may log onto Vendor' support site to determine the status of their issue.
7. Once a call has been resolved, users receive an automated notification by email that the issue (and associated call) has been closed. The email notification contains the entire event history of the call from the time the call was created and leading up to the resolution of the call. Users also have the option of viewing both their open and closed calls, if available to the user, via the Vendor' support website.
8. If an issue needs to be escalated to a development resource or programmer for resolution, the issue will be logged into our development tracking database and the user will be provided with a separate id number to track the progress of the issue. At this time, the support call will be closed and replaced by the development id number. The development id number will remain open until the issue has been completely resolved. Issues escalated to development will be scheduled for resolution based upon the nature and complexity of the issue.
9. Users may contact Support Services at their convenience for a status update on any development issues or may log onto the Vendor Support website to view your issues on-line.

Handling Requests

Time to time there might be a need to enhance the system, HES will work with the Customer to triage the request and chose the appropriate disposition as follows:

- **Global:** Customer is requesting and will benefit all partners. This becomes a roadmap and HES Investment
- **Semi-Global:** Customer is requesting it, not all partners can benefit, but could be potential. This becomes a shared cost. Half HES funded and Half Customer funded.
- **Not Global:** Customer is requesting it; no other partners can benefit could be a potential. This becomes customer funded.
